Diego Alvarez

React developer
Buenos Aires

Summary

I'm a React developer

Evolved problem solving skills with the years learning algorithms
with different programming languages and paradigms. Always digest
problems into fragments, in a deterministic and declarative approach.

I love to learn by teaching and coding.

Experience with C/C++, python, HTML5, CSS3 and javaScript: ES6.

Experience with React and Redux: State management, Context
API, optimization with memoized techniques, colocation and
composability, styled-components(emotion), Gatsby, Next, Jest,
Mocka.

Experience with Hooks.

Building my custom hooks library.

I am looking to:
• Write and learn as much I can about React and JS.
• Get senior experience in the field.
• Collaborating with startups and open-source.
• Improve the healthcare industry, developing innovative tools and
resources.
• Make the world a healthy place.
